ASSIGNMENT 5

Textbook Assignment: "JP-5 Afloat Flight Deck Systems and Operations (continued)," "Afloat MOGAS and Lube Oil Systems and Operations," and "Ashore Systems and Operations," chapters 5, 6, and 7, pages 5-16 through 7-8.

- 5-1. The checker requests the fuel load from an aircraft. The pilot responds with four fingers held vertically followed by three fingers held horizontally. How much fuel is in the aircraft?
 - 1. 4,300 gallons
 - 2. 4,300 pounds
 - 3. 4,800 pounds
 - 4. 430 pounds
- 5-2. What is the minimum number of personnel required to fuel an aircraft?
 - 1. Five
 - 2. Two
 - 3. Three
 - 4. Four
- 5-3. If you are fueling an aircraft in the hanger bay and there is no roving fire-fighting equipment manned, you must have a portable fire extinguisher nearby. What other equipment on the flight deck normally satisfies this requirement?
 - The flight deck sprinkler system
 - 2. The catapult steam smothering system
 - 3. The flight deck AFFF stations
 - 4. The flight deck P-16
- 5-4. What is the maximum time a fuel hose can go without sampling and testing and still be used to fuel aircraft?
 - 1. 12 hr
 - 2. 24 hr
 - 3. 26 hr
 - 4. 32 hr

- 5-5. The grounding wire connecting sequence for the pressure fueling nozzle is from the
 - 1. deck to the aircraft
 - 2. aircraft to the deck
 - 3. deck to the nozzle
 - 4. nozzle to the deck
- 5-6. Since most personnel in a refueling crew are experienced, squadron personnel are not required to be present when fueling aircraft.
 - 1. True
 - 2. False
- 5-7. The flow control handle of the pressure refueling nozzle must be placed in the FULLY OPEN or FULLY CLOSED position. Why is the handle not allowed to "float" when refueling?
 - To prevent excessive wear on the aircraft adapter and the nozzle poppet
 - 2. To ensure the station will go into the defuel mode if an emergency occurs
 - 3. The time it takes to refuel the aircraft will double
 - 4. The possibility of contamination is increased
- 5-8. Who is responsible for ensuring the aircraft is fueled to the correct fuel load?
 - 1. Crewleader
 - 2. Yellow shirt
 - 3. Air Boss
 - 4. Plane captain

- is/are correct concerning hot refueling?
 - 1. No static samples can be taken
 - 2. Pilot-in-command changes are not permitted
 - 3. The aircraft cannot be refueled if it fails precheck
 - 4. All of the above
- 5-10. To defuel an aircraft, a written request must be submitted to and approved by whom?
 - 1. V-4 Division Officer
 - 2. Air Boss
 - 3. Aircraft Handling Officer
 - 4. Control talker
- 5-11. Prior to defueling an aircraft, a sample must be drawn and tested for which of the following?
 - 1. Flash point
 - 2. Free water
 - 3. Sediment
 - 4. All of the above
- All personnel directly involved in 5-12. fueling or defueling operations must wear the proper safety gear. This gear includes a cranial, goggles, jersey, gloves, and life vest. However, when the ship is not at flight quarters, only goggles are required.
 - 1. True
 - 2. False
- 5-13. Whose job is it to check the fuel loads on incoming aircraft?
 - 1. Crewleader
 - 2. Flight deck chief
 - 3. Nozzleman
 - 4. Checker
- 5-14. The aviation lube oil system is operated according to what system?
 - 1. ALOSS
 - 2. LOOSS
 - 3. DLOSS
 - 4. CFASS

- 5-9. Which of the following statements 5-15. When taking on lube oil, the tanks should not be filled beyond what capacity?
 - 80%
 - 2. 85%
 - 3. 90%
 - 4. 95%
 - 5-16. What is used to determine the frequency of maintenance required on the lube oil pump?
 - 1. MDC
 - 2. PMS
 - 3. IRS
 - 4. PQS
 - 5-17. The MOGAS system is operated according to what system?
 - 1. CFOSS
 - 2. EOSS
 - 3. AFOSS
 - 4. ALOSS
 - 5-10. The fundamental law of hydraulics is that any pressure or force applied to a confined liquid will be transmitted equally and undiminished in all directions regardless of the size of the container.
 - 1. True
 - 2. False
 - 5-19. Why does gasoline float on water?
 - 1. Unit by unit, gasoline weighs less than water
 - 2. Unit by unit, gasoline weighs more than water
 - 3. Atmospheric pressure has more of an effect on water
 - 4. Water is lighter than gasoline
 - 5-20. Gasoline systems are designed to be full at all times to prevent what occurrence?
 - 1. The gasoline from overflowing
 - 2. Over-pressurizing the tanks
 - 3. The buildup of contaminants
 - 4. Explosive mixtures forming in air pockets

- 5-21. A saddle-type gasoline storage tank is actually a combination of how many tanks?
 - 1. One tank and two cofferdams
 - 2. Two tanks and one cofferdam
 - 3. Two tanks and two cofferdams
 - 4. One tank and one cofferdam
- 5-22. What device connects the outer tank 5-28. to the draw-off tank?
 - 1. A sluice pipe
 - 2. A diffuser
 - 3. A cross connect
 - 4. The outer tank service riser
- 5-23. What gasoline tank is the first to be filled and last to be emptied of MOGAS?
 - 1. Outer tank
 - 2. Cofferdam
 - 3. Service tank
 - 4. Draw-off tank
- 5-24. What is the cofferdam normally filled with for protection?
 - 1. Water
 - 2. Gasoline
 - 3. CO_2 or N_2
 - 4. JP-5
- 5-25. When cofferdams are charged with nitrogen, what percentage of inertness must be maintained?
 - 1. 25%
 - 2. 50%
 - 3. 75%
 - 4. 85%
- 5-26. When cofferdams are charged with carbon dioxide. what percentage of inertness must be maintained?
 - 1. 25%
 - 2. 30%
 - 3. 35%
 - 4. 50%

- 5-27. The pressure-relief valve in the bypass line of the air escape riser is set at what psi?
 - 1. 1 psi
 - 2. 2 psi
 - 3. 3 psi
 - 4. 4 psi
- 5-28. When the gasoline storage tanks are 100% full of seawater, what will the differential pressure gage read?
 - 1. 100
 - 2. 2
 - 3. 0
 - 4. 4
- 5-29. What is unique about the float used in a MOGAS system TLI?
 - 1. It sinks in water
 - 2. It sinks in fuel
 - 3. It does not contain a magnet
- 5-30. What device ensures back-pressure is maintained on the tanks to force gasoline to the suction side of the gasoline pumps?
 - 1. A priming pump
 - 2. An elevated loop in the overboard discharge line
 - A venturi installed in the discharge line
 - 4. The downsized discharge piping
 - 5-31. What device is designed to break the syphoning effect of the overflow loop?
 - 1. A swing check valve
 - 2. A sight glass
 - 3. A spectacle flange
 - 4. A vent line
 - 5-32. To what pressure is the outer jacket of the double-walled piping pressurized with inert gas?
 - 1. 12 psi
 - 2. 15 psi
 - 3. 3 psi
 - 4. 5 psi

- 5-33. What device is provided in the bellows of the double-walled piping to inspect for fluid inside the double-walls?
 - 1. A bolted manhole cover
 - 2. An easy-open hatch
 - 3. Sight glasses
 - 4. Drain plugs
- 5-34. Constant pressure is maintained in the automatic pressure regulating system by balancing the spring tension in the pilot valve against what pressure?
 - The spring pressure in the main valve
 - The ejector strainer spring pressure
 - 3. The venturi throat pressure
 - 4. The station discharge pressure
- 5-35. What device prevents chatter of the main valve in the pressure regulating system?
 - 1. The venturi
 - 2. The ejector strainer assembly
 - 3. The recirculating line
 - 4. The reinforced diaphragm in the main valve
- 5-36. What is the function of the control valve in the automatic pressure regulating system?
 - 1. To control discharge pressure
 - To reduce the violence with which pump pressure is admitted to the main valve cover chamber
 - To close the main valve during a sudden buildup in downstream pressure
 - 4. To direct fuel flow to the venturi
- 5-37. A recirculating line on the delivery side of the venturi tube returns what percent of the capacity of the booster pump?
 - 1. 3%
 - 2. 5%
 - 3. 7%
 - 4. 10%

- 3-36. Why is a metal bellows used instead of fiber packing in the sylphon packless globe valve?
 - The fiber packing shrinks or deteriorates
 - 2. The metal bellows never requires replacement
 - The fiber packing will hold a static charge
 - 4. The metal bellows will not corrode
- 5-39. The pressure relief valve for the cofferdam is set at what psi?
 - 1. 7 psi
 - 2. 10 psi
 - 3. 14 psi
 - 4. 50 psi
- 5-40. How long after the fixed CO₂ system is activated will the CO₂ actually be discharged?
 - 1. 5 sec
 - 2. 10 sec
 - 3. 15 sec
 - 4. 30 sec
- 5-41. When the CO₂ flooding system is activated, which of the following actions will NOT automatically happen?
 - A warning bell will ring in the space
 - 2. A visual alarm will show outside the space
 - 3. The electrically operated hatches will open
 - 4. The ventilation motors will stop
- 5-42. What is the maximum allowable capacity of MOGAS that can be brought onboard when the ship is alongside a pier?
 - 1. 75%
 - 2. 80%
 - 3. 85%
 - 4. 95%

- 5-43. What is the normal maximum allowable tanktop pressure when filling the MOGAS tank?
 - 1. 3 psi
 - 2. 23 psi
 - 3. 25 psi
 - 4. 45 psi
- 5-44. The MOGAS transfer pump is NOT to be started if the temperature in the discharge header exceeds how many degrees?
 - 1. 75°F
 - 2. 90°F
 - 3. 95°F
 - 4. 100°F
- 5-45. How many changes of seawater are required to ensure proper flushing of the MOGAS tanks?
 - 1. One
 - 2. Two
 - 3. Three
 - 4. Four
- 5-46. The filter/separator used on shore activities is designed to remove what percent of solid and water contaminants?
 - 98% of all solids and 98% of all water
 - 100% of all solids and 98% of all water
 - 3. 98% of all solids and 100% of all water
 - 4. 100% of all solids and 100% of all water
- 5-47. The manual water drains on the filter/separator are connected to what component(s)?
 - A recirculation line going back into the tank
 - 2. A recovery system
 - The shore activity's sewer drain lines
 - 4. The fuel monitor

- 5-48. Which of the following locations requires a filter/separator?
 - The suction side of transfer pumps
 - 2. The storage tank to storage tank transfer lines
 - 3. The water drain line
 - 4. The supply piping from the storage tanks to aircraft refueler truck fill stands
- 5-49. Fuel quality monitors have fuses installed inside. What part of the fuse absorbs water?
 - 1. The paper pleat
 - 2. The sensing washers
 - 3. The fiberglass core
 - 1. The paper plug
- 5-50. At least how long must fuel maintain contact with the metal walls of a relaxation chamber?
 - 1. 1 min
 - 2. 5 min
 - 3. 30 sec
 - 4. 45 sec
- 5-51. All hoses used on shore activities should meet which of the following requirements?
 - 1. Collapsible
 - 2. Non-collapsible
 - 3. 25 feet in length
 - 4. Equipped with a continuity wire in the center of the hose
- 5-52. The hose end pressure regulator installed with the nozzle assembly is set for what maximum psi?
 - 1. 45 psi
 - 2. 50 psi
 - 3. 55 psi
 - 4. 60 psi
- 5-53. The loading systems on a loading rack are approved for multiproduct use.
 - 1. True
 - 2. False

- 5-54. Above-ground tanks must be surrounded by an enclosure capable of holding the entire capacity of the tank, plus how much freeboard?
 - 1. 1 ft
 - 2. 2 ft
 - 3. 5 ft
 - 4. 7 ft

- 5-55. The transfer line on a shore activity is 8 inches in diameter.

 The letters identifying the product are required to be what size?
 - 1. 1 in.
 - 2. 2 in.
 - 3. 3 in.
 - 4. 4 in.
